

## SPECIALITY PRODUCTS

### UREGEL

UREGEL is a low viscosity, rapid gelling, hydrophobic grout. UREGEL is used to seal leaks in cracked concrete, for soil stabilization and for repairing leaking joints in structures. This all-purpose grout is easily mixed with water or stabilizer at a convenient 1 to 1 by volume mix ratio.

#### Benefits:

- Easy 1 to 1 mix ratio with water
- Rapid gelling
- Non-Flammable
- Water like Consistency
- Deep Penetration into cracks or soil
- Flexible, High tensile elongation
- Will not dry out if not in contact with water
- Remains flexible in water, dry joints or soil
- Excellent bond to soil, concrete, rock or other porous materials
- UREGEL be pumped from the inside or the outside of a structure.

#### Applications

- Sealing cracks in concrete or honeycombed concrete.
- Inject into soil as a soil stabilizer
- Joint repair for pipes in water or sewage facilities
- Elevator Pits
- To stop soil erosion due to flowing water or seepage.
- Manholes. Used to prevent water infiltration.
