

SEALKOTE SUPER

SEALKOTE SUPER is a black liquid Reclaimed Asphalt additive developed by TECHNOKOTES. Designed to rejuvenate the oxidized binder on the reclaimed stones, SEALKOTE SUPER turns the otherwise carcinogenic rock waste into a packaged cold asphalt mix used for pothole repair or new road construction.

SEALKOTE SUPER asphalt solution is from a recycled base, so there isn't any waste created in the process. The technology is up to 1500% more cost effective than conventional methods.

Benefits

- Cold application reducing energy consumption and year-round work-ability (rain or snow)
- Quick and cost effectiveness: fix a pothole in 30 seconds
- Environmentally friendly solution - 99% of the mix is from recycled resources
- Easy to apply (even manually!) and guaranteed to be permanent
- Minimal traffic intervention through simplified processes

Applications

SEALKOTE SUPER is a non hazardous black liquid to be cold mixed with reclaimed asphalt stones, resulting in a multipurpose cold asphalt mix that can be used for:

- Pothole repair
- Over lays
- Edge repairs
- Finisher application
- Micro trenching
- Manhole and valve surrounds
- Utility cuts
